NO. 14 数学の歴史(2)

Various other books on mathematics appeared in the following centuries. But, by the 5th century, it seems that the Chinese already had the concept of negative numbers and perhaps also had the concept of "zero. Around the 13th century, Chinese mathematicians were solving equations using methods that Europeans would not discover until 500 years later!

Unfortunately, near the end of the 14th century, the leaders of China began to be critical of math and science. Because of this change in attitude, people turned away from the study of math to study plants and medicine instead. It wasn't until the 19th century that the Chinese would become interested in math again, but this time under the influence of European mathematical knowledge.

1	concept	名詞	概念・発想・基本的な考え
2	notion	名詞	考え・理解・意向
3	equation	名詞	方程式・同一視・均衡
4	equivalent	形容詞・名詞	同等の・相当する・同等のもの
5	method	名詞	方法
6	manner	名詞	方法・態度・行儀[複数形]・風習[複数形]
7	medium	名詞・形容詞	手段・媒体・中間の
8	unfortunately	副詞	残念なことにも・不幸にも
9	miserable	形容詞	惨めな
10	critical	形容詞	批判的な・重大な・危機的な・批評な
11	attitude	名詞	態度・考え方
12	turn	自動詞・他動詞・名詞	変わる・回転する・曲がる・回転・順番
13	bend	自動詞・他動詞	曲がる・かがむ・屈服する・を曲げる
14	curve	自動詞・名詞	曲線を描く・曲線
15	switch	自動詞・他動詞・名詞	変える・スイッチ・変化
